

# **WSO Mist Collectors**

Filtration Technology for Mist Collection

#### **The Only Mist Collector You Need**

The versatile, new Donaldson<sup>®</sup> Torit<sup>®</sup> WSO Mist Collector provides 3 filter solutions for the 3 mist categories: water-soluble coolants, straight oil, and the most challenging, oily smoke. The WSO uses revolutionary new Synteq<sup>™</sup> XP filter media engineered for superior draining, resulting in lower pressure drop and longer filter life.

The WSO is ideal for lean work cells. As machining operations change, the WSO can be modified with a simple filter change, leading to leaner operations, cost savings and cleaner plant air.

#### **WSO Offers:**

- 3 in 1 solutions for mist applications
- NEW! Advanced
  Synteq<sup>™</sup> XP Media
- Cross-flow design for better drainage
- Energy savings

- Lower life cycle costs
- Quiet operation
- UL-approved electrical components
- 10-year warranty

# 3 APPLICATIONS 1 COLLECTOR

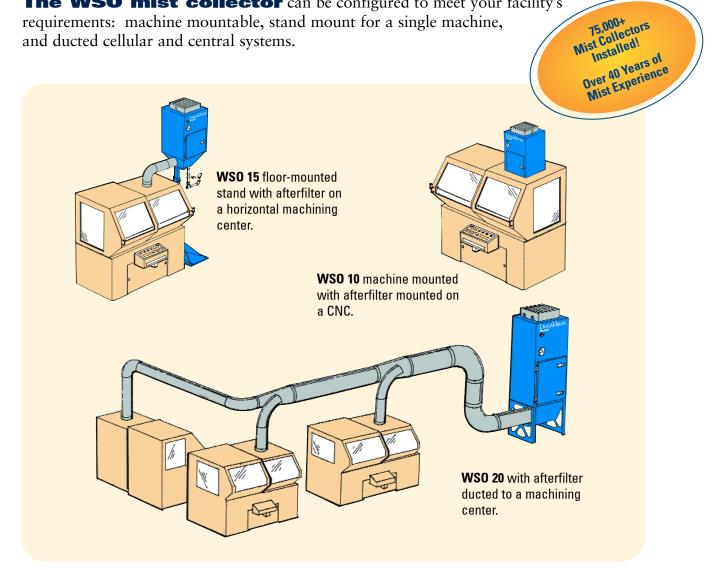

WSO 15 with optional 3rd-stage HEPA filter

#### The WSO Difference

**The WSO mist collector** can be configured to meet your facility's requirements: machine mountable, stand mount for a single machine, and ducted cellular and central systems.

### **Easy Filter Maintenance**

• Differential pressure gauge(s) identifies filter maintenance

• One pivot lever securely retains the primary filter element

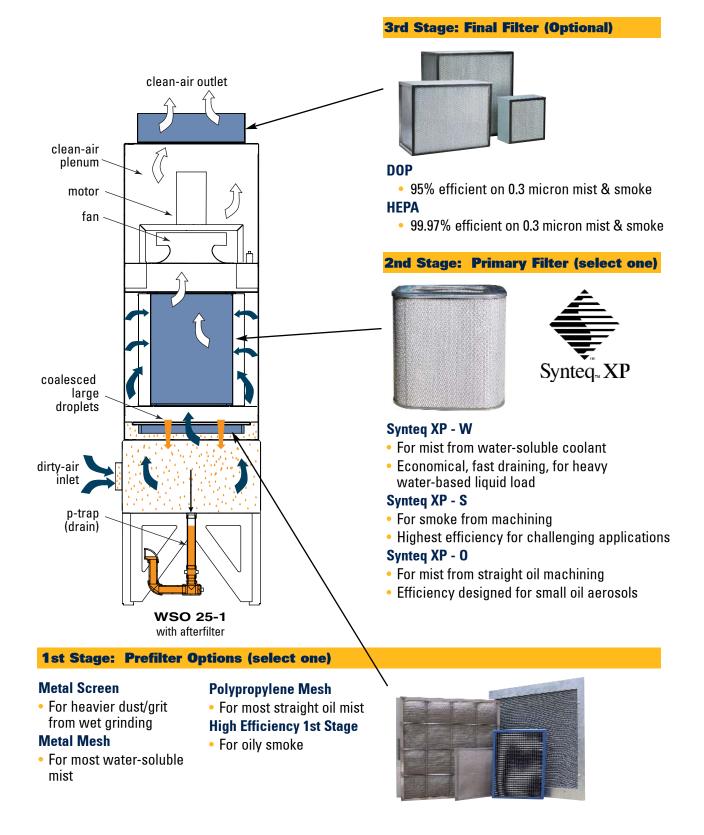

· Filter is easily removed

1

 Simplified servicing means less maintenance time and cost

### Versatile in Application, Flexible in Design

2

# **WSO Mist Collectors**

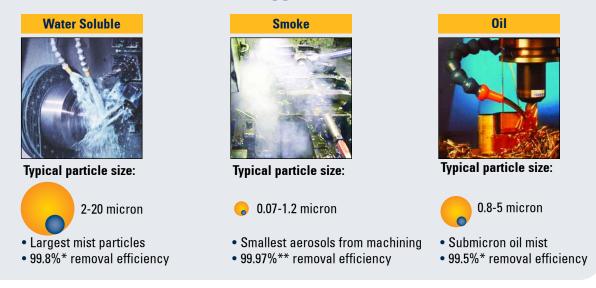

#### **Oblong Cartridges Outperform Traditional Filters**

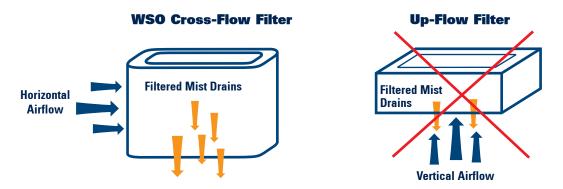

#### **WSO oblong filter shape features:**

- Up to 45% more filter surface area than pocket filters and round cartridges
- Best fit in rectangular cabinet
- Lower pressure drop
- Longer filter life

#### **Choose the Best Filter for Your Application**

**Cross-flow filter design for better drainage** means longer filter life. Dirty air flows horizontally through the walls of the WSO filter, perpendicular to drainage of collected and coalesced mist. This design promotes optimum drainage, which extends filter life and returns collected coolant for re-use. Conventional mist collectors have an upflow design impeding drainage and causing short filter life.

\* Stated efficiency typical for water soluble and straight oil applications. The use of a 95% DOP or HEPA filter may be required. \*\* Stated efficiency typical for oily smoke applications using a HEPA final filter.

4

#### **New Advanced Filter Media for Mist**

**Patent-pending Synteq XP is a revolutionary new media** for mist collection that provides high efficiency, low operating pressure drop, and long filter life when compared to traditional media.

This photo from our Scanning Electron Microscope and the illustration show why Synteq XP technology provides superior performance on mist collection applications.

### **New Synteq XP Media with Resin-Free, Binding Fibers** Engineered blend of small & large fibers, with proprietary, resin-free bonding system Small fibers are scientifically proven to increase efficiency • Large fibers provide structural support & clear drain channels Proprietary bonding system stabilizes pore structure for optimum performance 500> Polvester binding fiber **HOW:** The surface of this special binding fiber is softened with heat just enough to make it bond to the **Glass** fibers for filtration surrounding glass fibers. No webbing, no blocked pores. **Traditional Mist Cartridge Media** Traditional Mist Panel Filter Media (with Resins) (Loose Fibers) Made with resins Four-layer media to bond fibers structure without fiber bonding Resins reduce air

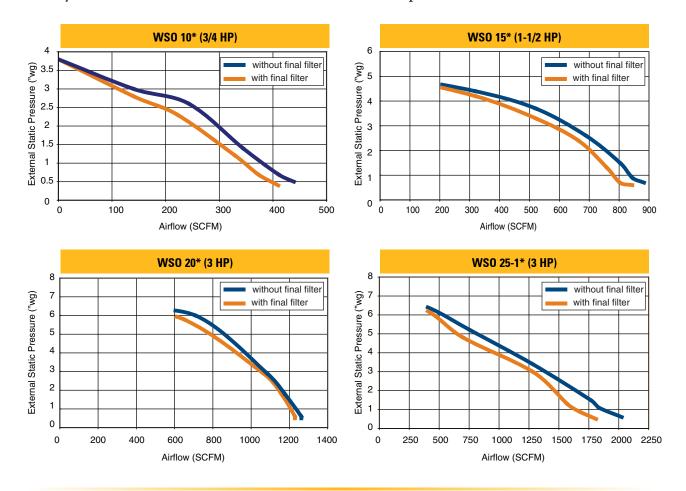

pathways and

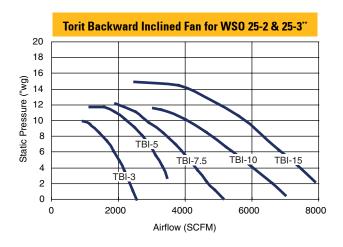

block drainage

- Fibers sag under weight of oil
- Fiber movement creates larger holes that pass oil

#### **System Curves for WSO**

**Powerful Performance** Unlike other products that require upgrades for more demanding applications, each WSO comes standard with a unique high performance fan. The system curves below indicate available external static pressure to the unit with clean filters.

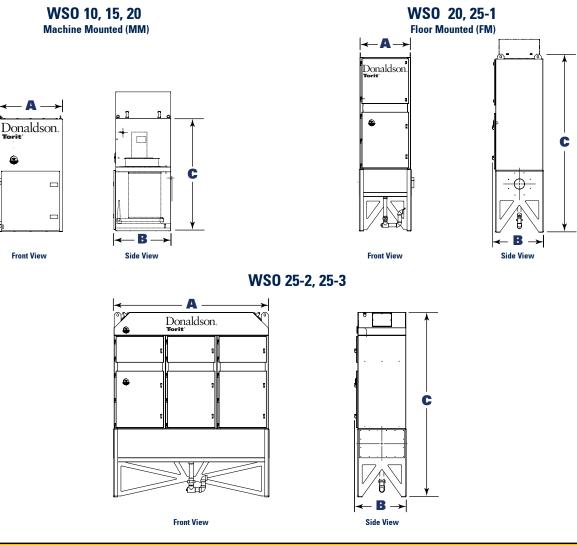

\* WSO 10, 15, 20, and 25-1 have integral power packs (motor and fan).

\*\* These fan curves are for the TBI fan only and do not account for WSO system losses.

\* Based on clean filters.

\*\* Published dB(A) sound pressure levels were made in a hemi-anechoic chamber. Units were run with clean filters and maximum airflow through approximately 10 feet of ducting connected to an inlet plenum. Measurements were made 1.5 meters off the ground, 1 meter away from the collector, on the filter door side of the mist collector. Actual installed equipment sound pressure levels will vary depending upon the measurement location, the operating conditions, the installation, and the surrounding environment.

† Optional fans available. See optional fan specifications for sound level data.

# Cleaner Air Worldwide

### **Better Technology**

- 550 engineers worldwide
- More than 500 patents
- Broad range of innovative collectors and filters
- 100's of media formulations

### **Experience & Service**

- Technical expertise and support
- Ready-to-ship filters and parts within 24 hours
- 1,000,000+ dust, fume, & mist collectors installed

### **Global Support**

- Facilities in 35 countries
- 37 manufacturing plants and 11 distribution centers
- Sales offices worldwide
